STATE OF VERMONT

Policy Impact Assessment

SECTION I: INTRODUCTION

Purpose

This assessment is intended to act as a useful framework for the development and review of a proposed policy and its potential impacts, both direct and indirect. It can be used in multiple ways:

- to inform decision makers prior to a final decision on legislation, rules, or spending;
- to inform project planning and community/economic development approaches; and
- to assess legislation, policies, and programs that are already in existence.

Regardless of when it is used, it serves as a powerful mechanism to help qualify, quantify, and provide transparency into the decision-making process.

The order of the questions is intentional and is meant to mimic an ends-to-means thinking process which should bring to light the assumptions and logic behind the proposal, as well as the ways in which progress towards desired ends will be monitored over time.

Many of the questions focus on equity. Historically, policy has been made based on the needs and preferences of people in dominant groups, which has created disparate impacts for groups who are marginalized. Further, some well-meaning policies are intended to be neutral but still result in disparate negative impacts for specific groups.

Vermont recognizes that in failing to protect our most vulnerable community members from the impact of our policies and programs, we are only hurting ourselves. One crucial defense against disparate impacts of policies and programs is to conduct an impact assessment prior to budgetary or programmatic decisions that will impact communities.

How to Use This Tool

This tool is intended to serve as a systematic examination of

- 1. The theory of change, and the assumptions therein, embedded within the proposal;
- 2. How different marginalized groups will be affected by a proposed action or decision; and
- 3. The degree to which we can measure, track, and align our proposals with overarching goals.

Use it to

- ✓ minimize unanticipated adverse consequences in proposed policies, institutional practices, programs, plans, and budgetary decisions.
- ✓ maximize investments and staffing by anticipating needs, benefits, and harms.

These analyses are best conducted during the decision-making process, *prior* to enacting new proposals (much like environmental impact statements, fiscal impact reports, and workplace risk assessments).

This form is not to be used as a "final check" before submitting a proposal. Rather, it should be used early in the idea-generating phase to ensure you have gathered the community input, demographic data, and resources necessary to make the program **efficient**, **inclusive**, and **successful**.

SECTION II: ASSESSMENT

Instructions: Complete this form as thoroughly as possible and submit with any supporting documentation to your reviewer/approver. For questions regarding this form, contact the Chief
Performance Office or the Office of Racial Equity. At a minimum you must answer the bolded questions for initial review by the Governor's Office: 1, 4, 6-9, 12, 16, 18-25, 27-31, 33-34, 38, 39

BACKGROUND

1.	What population-level outcomes from the Annual Outcomes Report and/or breakthrough
	indicators from the Statewide Strategic Plan does this proposal contribute to?

2.	What	Statewide	Strategic F	Plan strategy	is this	proposal	associated	with?
----	------	-----------	-------------	---------------	---------	----------	------------	-------

3.	What other	priorities	(e.g., a	agency.	department.	etc.) does t	his pro	posal	align	with?

PROBLEM DEFINITION

- 4. What is the specific problem/gap being addressed by this proposal?
- 5. What is known about the problem/gap? What specific data are available that indicates there is a problem/gap? What trendlines are you attempting to turn?
- 6. For whom does this problem/gap exist? Who is the target population of the proposal? Include demographic information such as race, ethnicity, sexual orientation, gender identity or expression, age, ability, etc.
- 7. How was this group(s) determined?

PROPOSAL 9. Is		ated to COVID-19 re	esponse or recov	very?	
	Yes	No			
10. WI	nat are you prop	osing to do?			
11. WI	ny do you think i	t will work? What da	ata or evidence s	supports this proposa	al?
12. WI	nat does succes	s look like?

Glossary

Disadvantaged Business Enterprise (DBE): As defined by the U.S. Department of Transportation, DBEs are "for-profit small business concerns where socially and economically disadvantaged individuals own at least a 51% interest and also control management and daily business operations. African Americans, Hispanics, Native Americans, Asian-Pacific and Subcontinent Asian Americans, and women are presumed to be socially and economically disadvantaged. Other individuals can also qualify as socially and economically disadvantaged[...]"

Disparate Impact / Disparity: An imbalance or inequality between the treatment of different groups. These imbalances may manifest as differences in economic outcomes, income, housing options, societal treatment, safety, justice outcomes, health, educational opportunity, or other dimensions.

Equity: The condition that would be achieved when a person's race or other demographic group membership is no longer predictive of that person's life outcome.

Marginalized population/group: Communities or groups that have historically experienced systemic barriers to access, resources, and infrastructure investments. It may include communities of color, women, sexual orientation, transgender individuals who identify along the gender spectrum, immigrants and refugees, or people with disabilities. It may also include others who have received limited access to benefits, services, investments, and resources from public/private institutions, including the State of Vermont.

Minority- or Women-Owned Business Enterprise (M/WBE): Businesses that are at least 51% owned and substantially managed by people of color and/or people identifying as women.

Performance Measure: A measure of how well a program, agency or service system is working. Performances measures answer one of these three questions:

- 1. How much are we doing?
- 2. How well are we doing it?
- 3. Is anyone better off?

Performance Measure Target - The quantification of a desired result associated with a particular performance measure.

Frequently Asked Questions

1. What should we do if we identify a disparity or other issue after using this tool?

Next steps will vary on a case case-by -case basis. At one extreme, it may be wise to withdraw the proposal altogether. More realistically, it may just require tweaks to make the proposal more equitable or efficient in design or delivery. This might mean more money is needed to reach more people or specific people. Other times, this means lengthening the timeline to complete translations before launch, not after. There are many ways to improve upon our policy ideas in ways that make our work more effective and more inclusive—contact the Chief Performance Office or the Office of Racial Equity with questions or concerns.

- 2. For questions related to demographic or other data, what if there are no data on point? In Vermont, we face challenges with demographic data collection, especially on race and ethnicity. You may struggle to find recent or accurate data to answer the questions in this tool—do your best, cite your sources as needed, and thoroughly explain what we know and what we don't know. If there are gaps in data that are relevant to the proposal, consider using the proposal as a vehicle to capture those data—this helps our colleagues across state government who will rely on these data in the future.
- 3. For questions related to demographic or other data, should we only provide quantitative data? Or should we provide qualitative data too?

Anecdotal and qualitative data are important to policymaking. They provide policymakers and analysts a glimpse into the reality "on the ground," and provide a line of communication for people with lived experience to provide meaningful insight into programs and policies that impact their lives. That said, use these sorts of data judiciously: have a plan for how, when, where, and why to collect it. Create spaces where respondents know they are safe to share their feedback, and return to the community to show them how their feedback impacted our work. Data, time, and feedback are valuable, so consider compensating people for their participation.
